

**Date Posted:** 08/31/2011

**Location:** Main Office  
Denver, CO

**Position:** Business Analyst

**Department:** Information Technology

**Manager:** John Hodnett

This position will lead the analysis, design and configuration for all areas related to the SAP SD modules. This position is responsible for cross functional configuration as it relates to SD transactions and their relationship with other modules (MM, FI, COPA, etc). Position also requires Project Management skills to ensure that appropriate controls are used from design through implementation and support.

Duties include, but are not limited to:

- Perform SAP configuration enhancements based on business needs.
- Provide issue resolution and support to existing processes inside and outside of SAP.
- Provide business support of EDI transaction processing.
- Develop and maintain pricing procedures and access sequences.
- Develop and maintain written procedures for business processes including documentation control.
- Participate in design reviews, recommending and developing solutions such as User Exits, interfaces, custom code options, etc.

Qualified candidates will have 5-7 years of previous experience in an IT support and development environment, along with proven completion of more than one full life cycle SAP implementation. Experience with configuration of SAP SD required. Experience with configuration of MM helpful. Must be able to multi-task. College degree is strongly requested.

This position is exempt.

Salary to be discussed at time of interview.
