

## OPERATION OF NEW K-7 CUSTOM FUNCTION (firmware update 1.01)

With firmware version 1.01, the PENTAX K-7 now features an additional custom function called **Operate at AF Point "SEL"**. This new custom function affects the behavior of the 4-way controller when using user-selectable focus point adjustment.

To modify this custom function, navigate through the K-7's menus to custom function 36. Highlight the custom function, then press the right arrow to see your available choices.

Highlight your choice, then press the OK button.

**Calling Function Preference.** By default, when using user-selectable focus point adjustment, pressing your 4-way controller buttons will call the functions associated with those buttons. To change your focus point, you must first press the OK button, then use your 4-way controller to change the focus point.

**Select AF Point Preference.** By default, when using user-selectable focus point adjustment, pressing your 4-way controller buttons will change the focus point. To call a function associated with one of the buttons, you must first press the OK button, then press the button of the function you wish to call.
